

We have provided two files that define products and ingredients in JSON format:

- products.json
- ingredients.json

Using react16 latest with Hooks, and TypeScript, please write a program that returns all of the products

(defined in products.json) that contain the ingredient “Organic Banana” (defined in ingredients.json).

- Do not modify the JSON file
- Keep code as clean and readable as possible
- style using styled-component
- documentation
- unit-test
